Dear truth seeker,

I present to you the universe user manual. It contains all the answers you've ever wanted to know, some of which I've already revealed here e.g. the origin of the universe and the fundamental axioms of mathematics. Unbeknownst to you, I already beat the game and have all the answers. If you think long enough about buildingblocks.png, you'll realize the essence of existence is the expansion of space from a point and vice versa. There's only so many possibilities. I hinted at the equations of motion of life in life.md taking the form of light oscillating in a sphere but I'm not giving that away for free. If you want to know the equations of motion for life, consciousness and AGI then please consider donating.

In the meantime, I will derive the equations of motion for protein folding as a demonstration. This could take 1 – 5 years to write protein_folding.py since I work on this in my spare time.
